OBJECTIVE: Junior Developer

CAREER HIGHLIGHTS

- Developed an e-commerce platform, Exclusive Store, using React and Next.js with TypeScript. The project integrates libraries like TailwindCSS, Material UI, Radix-UI, and React-Slick. I utilized the Context API to manage the shopping cart system and integrated the Stripe API for payment processing and checkout.

- Developed a pet adoption API using TypeScript, Node.js, and NestJS. The application allows organizations to register and authenticate through JWT, and manage profiles and available pets for adoption. It implements search with filters and pagination, as well as file uploads using Cloudflare R2. The project follows TDD, DDD, Clean Architecture, and SOLID principles, with unit and end-to-end tests to ensure quality. It uses PostgreSQL, Docker, and Prisma for database management.

TECHNICAL SKILLS

- **Languages and Frameworks:** HTML5, CSS3, JavaScript, TypeScript, React, Next.js, Redux, Tailwind, Node.js, NestJS
- **Databases and Tools:** PostgreSQL, Docker, Prisma, Git, AWS S3
- **Testing:** Vitest, Jest, Unit Tests, E2E Tests
- **Practices and Methodologies:** TDD, DDD, Clean Architecture, SOLID, Clean Code, Agile Methodologies

OTHER COMPETENCIES

- **Web Development:** SEO, Accessibility, Responsiveness
- **Software Engineering:** Business Rules, Functional Requirements, Non-Functional Requirements
- **Languages:** Native Portuguese, Fluent English

RELEVANT PROJECTS

- Developed a full-stack feature for a betting application using TypeScript, React, Next.js, Node.js, and NestJS. The feature allows creating, editing, listing, and deleting operations (activities) with pagination support and integration with PostgreSQL and Prisma. The project follows Domain-Driven Design (DDD) and adopts TDD practices with Vitest and Supertest. The back-end was structured with clear folder organization, divided into Core, Domain, and Infra. The system implements JWT authentication and uses Docker for container management.

PROFESSIONAL EXPERIENCE

Front-end Developer | Devvo – Brasília /DF 07/2024 - 09/2024
·Contributed to the development of a complete e-commerce platform using React and TypeScript, ensuring a smooth and responsive user experience.
·Improved application scalability by optimizing the component architecture and state management.
·Collaborated on UX/UI improvements, refining user flows and optimizing components for better usability.
·Focused on performance optimization, implementing strategies to enhance the application's speed and efficiency.
·Contributed to pull requests, code reviews, and maintained high coding standards.
·Worked with agile methodologies, using Jira to track tasks and ensure timely delivery of features.

Education:

Software Engineering – Unicesumar, 02/20 - 02/25
Interrupted

Relevant Courses:

Rocketseat - React & Next | Rocketseat - Node, Express & Nest
